

# Epos System

## Scales and weighing

# Multi Retail

**Profitable Epos**  
made simple...

# BIZERBA

### Reasons for buying

#### 1 *Faster tills*

Using touch menus makes serving those items that aren't barcoded very easy with dedicated keyboards for different goods like fruit and vegetables, press the button and the weigh is read from the scale.

#### 2 *Quicker price updates*

No need to go to each scale entering prices and label text, it can all be sent from the office pc and updated even whilst the operator is serving

#### 3 *Better sales reporting*

You don't have to wait until the end of trading to see what's selling, how much money you have taken or how many customers you have served.

### Automatically send price updates to your scales

Depending on the nature of your retail business, the type of scales you require will vary. Open Retail offer a choice of scales from stand-alone weigh/label to till-integrated weighing plates. Either way, we only work with reputable and reliable suppliers. Whichever type of scales you use, Multi Retail provides a direct link to the tills and back office system, so whenever you need to change a price or add a new product you just enter the information once into your pc and it will automatically update the scales and tills. It's quick, easy and accurate!

## Weigh Plate

Whether you use integrated weigh plate or weigh/label scales, Multi Retail allows you to efficiently process multiple weighed items from different areas of your store. As it links your scales directly to the tills or back office, price changes will be automatically updated.

The scales have a touch menu to assist in picking the right items, or you can just enter the PLU number if you know it. The weight is read and price extended allowing a barcoded label to be printed off reflecting the different weights of each piece sold. These goods are taken to the till together with any other shopping. The till scans this barcode and sells it at the recorded price.

## Bizerba Software

Usually supplied as part of the scales installation is the Bizerba software that allows data to be imported and exported to the scales. It allows the scale to be configured for menus, label designs and display adverts.

## Hardware Partners

Open Retail works with business partners like Box Technologies, Dell, Bizerba and Verifone to provide a complete one stop solution. Our partners are chosen very carefully, only including those companies who offer a very high level of service and reliability.

## Benefits of the system

### 1 Prices linked to till and scales

Once you have agreed today's prices it takes no time at all to enter these in and get them downloaded into the tills and scales.

### 2 Ingredients and allergens

These can be stored and quickly edited to be included in the text that can be printed on the scale label.

### 3 Real time information

Knowing what is selling well during the day gives you chance to make the correct decision on reordering so that you do not run out of stock.

### 4 Links to trade accounts

Using the delivery feature the weighed items can be priced differently and also added to a customer account for invoicing.
