

Epos System

Reports List

Multi Retail

Profitable Epos
made simple....

Quick and easy reporting to help you operate more efficiently

We have developed many reports within Multi Retail to help our customers make more informed decisions. Whether you want to drill into a specific area of your business or zoom out for a more general look at performance, the intelligent reporting facilities allow you to quickly and easily view stock and sales performance, enabling you to make better buying decisions, order more accurately and maintain better and more efficient control over your stock control processes. Each report can be run over a specific time period with the results available in pdf or Excel spreadsheet formats. Whilst you're not likely to require all of the reporting options initially, you may find it useful to know the full list of reports available to you....

Reasons for buying epos

1 Developed Reports pack

As we offer 150 fixed reports there are versions from simple to advanced so you can progress over time. To ensure you get the key reports at the correct time there is a scheduler function.

2 Management information

Completed sales are updated into all the sales totals immediately and then all the enquiries and reports can be used enabling better decision making.

3 Excel Export

Once a particular position is found the results can be exported to excel spreadsheet for taking to a trade show, sending to a supplier or for more detailed study in house.

4 Date comparison

As the sales position is stored per day, the variable dates can be used for what length of time you want to get data for and also what date range to use when comparing previous years.
